

FIRST-CUSTOMER OFFER

Cloud + AI Cost Governance Snapshot

A bounded review for SaaS and technology teams that need to explain cloud spend, control AI/API usage, find waste, and install practical governance before costs or risk drift further.

BUYER PROMISE

Top waste, risk, ownership gaps, and a 30/60/90 day action plan.

Best fit

SaaS, technology, data, cloud-heavy service, and AI-enabled companies.

Access model

Read-only billing, exports, screenshots, or guided walkthrough first.

Timebox

Fast snapshot first, then paid assessment or sprint where justified.

Conversion path

Implementation sprint, landing-zone rescue, platform work, or monthly governance.

What We Review

- Cloud and AI/API spend patterns.
- Budgets, alerts, anomalies, tags, ownership, and showback readiness.
- Compute, storage, database, network, backup, and non-production waste.
- IAM quick risks, account/subscription hygiene, and governance drift.

What You Receive

- Executive summary with top opportunities.
- Governance scorecard across cost, IAM, tagging, logging, backup, and operations.
- Prioritized quick wins with owner/action mapping.
- 30/60/90 day roadmap and optional implementation proposal.

Why It Works

- Aligned with FinOps accountability: engineering, finance, product, and leadership see the same facts.
- Starts small without demanding a large transformation program.
- Focuses on value, waste reduction, risk visibility, and repeatable operating discipline.

Good First Signals

- Cloud bill is rising without clear owner-level explanation.
- Non-production workloads appear always on.
- AI/API usage is growing across tools and teams.
- Leadership needs board-ready or founder-ready actions quickly.

Entry

Free Snapshot

30-minute review to qualify fit and next step.

India Assessment

INR 49K-99K

Fixed-scope audit range, final quote after discovery.

Implementation Sprint

INR 2.5L-6L

For approved fixes, governance setup, and roadmap execution.
